## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-10 and 12-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Lockie et al. (5642122).

Regarding Claims 1-10, and 12-18, Lockie et al. show a communications satellite phased array antenna deployed from a retracted condition to a deployed condition, comprising a polygonal base member 39 with a plurality of hinged, hexagonally-shaped antenna panels 41,40a stacked one on top of the other (Figures 10-13) and when deployed are castellated in form, hinged sequentially and each panel is adjacent a respective edge of the base member, mounted on the opposite side of the base member (Fig. 9), and edge of the panel is located coterminii with the respective edge of the base member, and each panel is coupled to the base member via a back flap hinge (Fig. 13) having a pivot with sleeve and pin rotatable therein and a frame 45 extending from the pin and secured to the rear side of the antenna panel, by half the thickness of the antenna panel (Fig. 13) , all arranged as claimed.

### ***Claim Rejections - 35 USC § 103***

Art Unit: 2821

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 11 is rejected under 35 U.S.C. 103(a) as being unpatentable over Lockie et al. (5642122).

Regarding Claim 11, Lockie et al. show the array of antenna elements in Fig. 29, for example but do not appear to suggest routing of the electrical connectors/feeders. However, a skilled artisan would have found it obvious to employ feeder electrical connector means for the antenna, back to the base and into the satellite employing lines along the adjacent edges of the panels.

5. The patent to Stuart (5527001) is cited as of interest showing a satellite phased array antenna.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael C. Wimer whose telephone number is (571) 272-1833. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Douglas W. Owens can be reached on (571) 272-1662. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
